TOWN OF GRAND CHUTE

“Town Center Park” Concept Plan and Development Strategy

Visioning and Recommendations

August 2016

Prepared by the

East Central Wisconsin Regional Planning Commission
Trish Nau, Principal Recreation Planner
ACKNOWLEDGMENTS

The preparation of the Town Center Park Concept Plan and Development Strategy was formulated by the East Central Wisconsin Regional Planning Commission with assistance from the Town of Grand Chute Park Commission.

PARK COMMISSION

The commission is composed of eight members and meets approximately once a month and works on the planning and development of park improvements and policies.

PROJECT BACKGROUND

Community Statistics

With 22,249 residents, (2015), Grand Chute is the largest town in Wisconsin and is growing. There has been a 13.7% increase in population since 2000. It is one of nineteen communities in the "Fox Cities" metropolitan area, with over 370,000 residents. 700,000 people live within a 40 minute drive and 1.3 million live within the eighteen-county New North region. The town is about thirty miles southwest of Green Bay and one hundred miles north of Milwaukee.

It is located within the Eastern Ridges and Lowlands area of northeastern Wisconsin, with most of the natural features created by glacial activity. Topography is generally flat to gently rolling, interrupted by a few ravines cut out by Apple Creek, Mud Creek, Bear Creek, and their tributaries.

Table 1 shows the locations of each park and size, including Town Center. There are eight town parks totaling 130 acres. Also, Grand Chute is home to the Gordon Bubolz Nature Preserve, a 775-acre non-profit wildlife preserve education facility, and Plamann Park, a 257-acre county park. Fox Cities Stadium hosts the Wisconsin Timber Rattlers, a Class A minor-league baseball affiliate of the Milwaukee Brewers.

Town Government employs over 85 full-time staff, owns over 310 acres of land, manages 160,000 square feet of building space, and maintains over 120 miles of streets and ten miles of paved trails.

Project Site Description

The potential park site is just north of the Town Hall building and to the east of Bull Rush Drive and south of the White Hawk Meadows III subdivision, (See Map 1). “Center Park” (final name yet to be determined), will be located on the property owned by Grand Chute and is approximately 20 acres in size. Due to the amount of space available and the opportunity to provide this new amenity to the community, the town recognized the need to be strategic and thorough during the planning and development process.
Since January 2016, ECWRPC has been working with the Park Commission and staff to collect public input to determine the types of facilities residents would like to see on the 20+ acre property. A survey was developed with over 200 responses collected from residents. A public workshop was held at the Town Hall on Tuesday, April 26 from 5:00 p.m. - 7:00 p.m. to collect additional public input and get feedback on preliminary site designs. Informational tents were located in the new park to promote trails in the town and surrounding communities at a National Trails Day event on June 4, 2016. Town staff solicited comments on “Town Center Park” at this event.
SURVEY ANALYSIS

Items of interest were looked at to see what possible future park amenities should be created as well as the needs from the public. The survey was based primarily on demographics, a need for a certain activity i.e. trail access to and from the park, nature preservation, water feature(s), playgrounds, shelters and picnic areas. (See Appendices A & B for the detailed results.)

Facility analysis resulted in: (Question 8, “If new facilities are developed in “Town Center Park” I would like to see…”)

Top Three Overall:
1. Shelter with restrooms,
2. Exercise Areas, and
3. Playgrounds.

Age group vs. type of facilities:  
*163 = number of respondents to question, i.e. possible more than one child per age group per survey taker.

Type of Facility and Current Access: (Overall shows number 1 rating in each category and are highlighted.)

Natural areas have the best access, followed by Entertainment Resources as acceptable, with access to a Water Based Facility being poor.
Challenges Faced with Survey

- Unanticipated delays
- Reaching all age groups was difficult, but was boosted with social media and website postings as well as the visioning sessions and the National Trails Day event.
- Validity of survey itself, level of accuracy and number of participants who answered the questions correctly or had more than one response.
- Particular questions responded to the number of children were hard to formulate with crosstabs.
- Number of overall responses was 237 - only 1.1% of the town’s total population base.
- New park development can have dramatic effects on trying to increase park use and physical activity level among park users and improve perceptions of park safety as well.
- As trends today vs. trends tomorrow vary with the times, people may find that change difficult.
- Some respondents were reluctant to the new park with pets, noise, lighting of ball diamonds, and the wetlands not being preserved.
- Future funding needs – Some residents asked if their taxes will increase to support the park which is unknown at this time.

VISIONING AND MEASURING IMPACT

When looking for a place to enjoy leisure time, visitors travel because of an attraction or event. There has to be something to draw them to the place or community. Primary attractions vary from place to place and usually offer unique experiences such as sporting events, concerts, festivals, play areas, etc. The Town of Grand Chute along with the Appleton area has many events, parks, and facilities that draw visitors and residents alike throughout the year. Because of the growing population base, this new park should offer a unique experience based on nature-type themes and space to play organized sports with also a possible water feature. Two concepts are shown on Maps 2 & 3 of potential amenities that may be added. A Canadian National Railroad line also runs along the east side of the property that could offer a rail with trails connection to the existing trail system.

From the Visioning session of 12-15 respondents held on April 26, 2016, the public picked the following amenities as priorities for within the park:

(Each entry represents one response.)

Ball diamonds had the biggest support (13) along with playgrounds (7) and trails (5). Nature based amenities (3) and fitness areas (3) also had some interest along with an arboretum, basketball and tennis/pickle ball courts (1). Grand Chute staff will utilize the results of the session along with the survey to determine the need but also as to what is feasible on the site. Factors for development will include the geographic locations of residential properties for lighting concerns, access points into the park, and the number of unique amenities to draw the user as well as local trends.

The trends of the destination for spectators and participants, the size of the park, the location of the park, and the level of supporting infrastructure in the community as well as marketing all contribute to the success of an also possible economic boost to the town by having more tournament play area available, i.e. ball diamonds. The amount of positive or negative media attention, promotional budget, weather, and accessibility also play a factor in the economic impact outcomes. The shorter the time marketed before an event date, the less opportunity for tourists to plan their trip. Looking solely at “Town Center Park” and its location, the opportunities to make this a beneficial space for the town and increase the quality of life for residents is outstanding.

THE NEED FOR A PARK

When looking at the results of the survey, there were over 94% of the participants with small children and of those families, 59% have children that are aged between 0-8 years old with many having more than one child per household (49%). The park should be planned to accommodate growing families in the area but can be developed to accommodate a nature quiet-like setting as there is plenty of land mass. When looking exclusively at the parks that the town maintains and land mass, 130 acres, we utilize the 10 Acres per 1,000 person standard* to determine a deficiency or surplus that should be provided to tax payers. This includes the 20 acres for “Town Center Park”. A current deficiency exists when utilizing this formula now and in the future as population growth continues. The table below shows a breakdown of population from 2010 to 2040.

Table 2: Park Acres Needed Today*

</tbody>
</table>

*This standard is utilized by the National Park and Rec Association (NPRA) and ECWRPC as a general guideline. Town properties alone do not currently meet the needs of all its residents, but including the surrounding other public, semi-public, and private parkland, provides additional recreational opportunities to residents.

Adding those additional 20 acres through “Town Center Park” is definitely a demand according to the standard calculations for park acreage needed today by the town. Grand Chute will still be 162+ acres short by the year 2040 with the additional 20 acres added in. But again this is just a benchmark or guideline to follow to see where the town stands with its park and recreational amenities as it continues to improve and add to its park system to keep up with demand.

Table 3 shows data compiled by the US Census Bureau for the American Community Survey, 2010-2014. The town is comparable to the county and state with regards to the common age group of 25-44 making up the highest population base. In looking at this, young couples and families make up the bulk of the residents in Grand Chute which corresponds to the parks survey results sent out by the town, 35-44 age group = 38% and 25-34 = 23% with an average household size of four confirming that the park should be planned to accommodate growing families in the area.

**BENEFITS OF PARKS, OPEN SPACE AND TRAILS**

Planning for parks and open space is intended to improve the overall health and provide a sense of place for residents and visitors. Numerous researchers have attempted and succeeded in a number of cases in presenting scientific evidence that parks and open space have a number of benefits including community benefits, individual benefits, economic benefits, and environmental benefits.

Community benefits, like those for the Town of Grand Chute, can be considered values that bring a positive result to a group of people. Individual benefits are the exact opposite providing a direct result to a single person. Economic benefits mean effects of park and open space in attracting investment, tourism, and direct positive effects to property values as well as commercial dollars from hotels and restaurants. Finally, environmental benefits are those that show the benefits of protecting and enhancing existing natural areas. These subsidies are illustrated to show citizens and property developers alike the direct impact parks and open space have on the community and its citizens.

**Community Benefits**

- Families that play together report greater stability and satisfaction, the foundation of a stronger society.
- Recreation provides a sense of community and an opportunity to interact. Communities with natural areas and open spaces are considered good places for children and offer high quality of life to all residents.
  - Sixty-four percent of Americans consider it very important to conserve and protect wetlands, and 46 percent say they believe there are too few wetlands in North America according to a study conducted by Responsive Management. However, 63 percent could not name a single non-governmental organization
that helps conserve wildlife and natural resources, and 57 percent could not identify a
nongovernmental group that protects the environment. (Responsive Management, 2002)

- Community recreation reduces alienation, loneliness, and anti-social behavior.
- Recreation provides opportunities for community involvement, and shared management
  and ownership of resources.
- Recreation opportunities, facilities and the quality of the local environment are the
  foundations of community pride.
- Increased green space reduces crime rates.

**Individual Health**

Contributes to a resident’s overall well-being and health by providing the opportunity for
recreational activities which enhances the quality of residents’ lives. (QOL)

- Provide opportunities to experience and observe nature.
- Provide opportunities for learning and living a more balanced life.
- Provide a place for stress reduction, rest, relaxation, and revitalization through
  recreation.

Fit Life: Green exercise beats working out indoors (on line blog):

- “Exercise is well known to provide physical and psychological health benefits. But where
  we exercise may determine how much health benefit we get. Emerging scientific
  evidence is revealing that green exercise, which is defined as exercise done in a natural
  outdoor environment, has additional positive health effects compared to indoor
  exercise.”

- “…A review published in Extreme Physiology and Medicine found that, compared with
  indoor exercise, green exercise produces greater increases in our energy, happiness,
  self-esteem and concentration; and larger decreases in our levels of tension, confusion,
  anger, depression, blood pressure, stress and perceived exertion. People also report
  more enjoyment and satisfaction with outdoor physical activities, and they have a greater
  intent to repeat the activity at a later date.”

- In Washington County, Wisconsin residents were asked if they personally were
  benefited from parks, this what they had to say:
  - Helped improve overall physical health 55%
  - Helped obtain greater appreciation of nature/outdoors 79%
  - Helped decrease stress level 77%
  - Improved quality of life 76%
  - Helped provide balance between work and play 77%
“Here are six ways the outdoors makes us healthier: 1) The outdoors can spur weight loss, 2) Nature increases brain function, 3) It amps up vitamin D intake, 4) The outdoors may even help us age more gracefully, 5) Nature is great for stress-reduction, and 6) The outdoors makes us happy.”

According to the new 2016 county health rankings, Outagamie County, where the Town of Grand Chute resides, is in the higher half of the ranking system at 18 with 1 being the highest and 72 being the lowest according to the UW-Population Health Institute. Calumet County is listed as number two statewide for healthy outcomes which measures length of life and quality of life along with health factors and behaviors.

Economic Benefits

Attracts Investment

- Parks and open space enhances the quality of life that attracts tax-paying businesses and residents to communities.
- UW-Extension had recently put out a document studying the market potential of the town as compared to population growth and housing estimates. The study area

---

2 The Trust for Public Land, “8 Ways that Parks Improve your Health.”
3 “Grand Chute Town Center Market Potential”, Outagamie County UW-Extension Office
consisted of the area around the Town Hall (town center County A/Grand Chute Boulevard). The study concentrates mostly on businesses vs. recreational space but fitness and recreational services are listed within the report as well as multi-model connections. The document stresses barriers such as I-41 and ways of trying to look beyond the traffic issues in planning for space.

- Small company owners say recreation, parks, and open space are the highest priority in choosing a new location for their business. (Trust for Public Land, Economic Benefits Report, April, 2015)

**Attracts Tourism**

- “According to the Fox Cities Convention and Visitors Bureau, travelers spent more than $230 million dollars in Appleton and Outagamie County. That is an increase of 5.2% over the past years. In 2014, Town of Grand Chute travelers spending supported over 4800 jobs and over $122 million dollars in wages and salaries. Travelers spending in the Town of Grand Chute generated $29.8 million in taxes for local and state government.

- According to the US Bureau of Labor Statistics, the hospitality and leisure industry added 1.67 million jobs from February 2010 to May 2014. The Talent Tribune; a national website dedicated to all things HR about talent management, jobs, workplace culture, and recruiting; announced the best cities for hospitality jobs where Oshkosh is ranked 6th in the nation for our addition of permanent jobs.

- Recreation and park services are often the catalyst for tourism, a growing sector of the economy. For instance, the American Hotel and Lodging Association reported that Americans spent $150 billion on leisure related stays in 2000. That’s 59% of the total American hotel/motel industry ($2.54 billion) for the year. (http://www.manitowoc.org/parkandrec/benefits.htm)

**Environmental Benefits**

**Reduces Flooding**

- Green spaces help in reducing run-off and utilizing stormwater best practices as is followed by the County Land and Water Conservation Department. (LWCD) Education in shoreland buffers and pollution prevention are key to controlling flooding according to the LWCD.

- Natural areas reduce the rate and volume of storm water runoff, which reduces incidents and severity of flooding. Stream flowage has decreased by 3.7% for every 1% increase in protected wetlands along a stream corridor. (Illinois State Water Survey, 1993)

- A community near Boston purchased or protected 8,000 acres of wetlands along the Charles River. These wetlands were capable of containing 50,000 acres of water and were an alternative to a $100 million system of dams and levees. The loss of wetlands
would have resulted in $17 million in flood damage annually. (Trust for Public Land, *Economic Benefit Report*, 1999)

**Enhances Air Quality**

- An urban ecological analysis found that more green space within a city’s boundaries can improve the urban environment. Among the green space advantages listed in EcoPlanIT Madison: Green Space Goal (“Project EverGreen”: UW-Madison Department of Urban and Regional Planning) are: helping regulate air quality and climate, reducing energy consumption by countering the warming effects of paved surfaces, recharging groundwater supplies and protecting lakes and streams from polluted runoff.

- An urban ecological analysis in New Berlin, Wisconsin found:
  - Trees save urban residents a total of $11,000 each year in cooling costs. As young trees mature, this is expected to grow to $107,000 in saving each year.
  - Trees in the city remove over $478,000 worth of pollutants each year. (David B. Haines, *The Value of Trees in the City of New Berlin*, 2001)

**FUTURE STEPS**

The town has done a good job of providing park and facility features as well as opportunities that appeal to different age groups. “Center Park” should be an extension upon these offerings by keeping up with the demand of recreational use of residents. By increasing park and trail connections to the overall system that can be utilized by all age groups gives Grand Chute a leg up on its competition and offers tax payers more amenities instead of having to pay more by using Appleton’s or another communities programs and/or facilities.

Now that the public input information has been collected and analyzed, an engineering consultant will be hired to assist in the development of a master plan for the park. Once the Town Board approves the plan, construction of new facilities will begin and is anticipated for early 2017 starting with a parking lot, shelter building, and some amenities. The timeline provided on the next page gives the breakdown of what is anticipated for the park development. Table 5 gives an estimate of possible costs that could be included with the park project based on the residential requests from the survey and visioning session. The town should look at budgeting these in phases over the next 5-10 years to assist in the addition of each amenity.

*Again these are just estimates as the town has bids out already for certain amenities but will want to get current prices when installing as these will fluctuate from year to year.

General Recommendations

As shown by the analysis in this report, the town should target different audience groups with the amenities offered. Young children, early teen and adult areas can all be planned for in the 20 acres. Activity zone areas should be created within the park to accommodate all age groups. From the visioning session the most responses were for more ball diamonds, playgrounds, and trails. From the survey, the highest requests were for a shelter, exercise/fitness areas, and playgrounds. The table below gives a breakdown of some of the amenities that should be
developed with supporting data from the survey and visioning session and why they should be included in the park with a timeframe.

Table 6: “Town Center Park” Recommendations

<table>
<thead>

<th>Timeframe</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shelter with Restrooms = 68% requested this through the survey</td>
<td>Shelters tied for 4th chosen amenity</td>
<td>Build a shelter as one of the first amenities to accommodate and promote the park</td>
<td>Develop a Master Plan for park to include parking as well</td>
<td>1-2 years Immediate need</td>
</tr>
<tr>
<td>Exercise Areas were voted as the second needed facility at 66%</td>
<td>Fitness zones tied for the 4th chosen amenity</td>
<td>Create adult fitness zone areas next to playgrounds so adults can exercise along with their children</td>
<td>Develop a Master Plan for park to include these zones</td>
<td>2-4 years</td>
</tr>
<tr>
<td>Playgrounds (Biggest age group represented was 0-8) 0-4 = 53% 5-8 = 43%</td>
<td>Playgrounds were the second highest chosen category.</td>
<td>-Review individual playground components to include a tot area as well as climbers and equipment for 5-12 year olds. -Create a nature based theme.</td>
<td>-Develop a Master Plan for the park</td>
<td>6 mos. - 1 year</td>
</tr>
<tr>
<td>Trails and Connectivity was #1 Priority for health initiatives</td>
<td>Multi-Use Trails were of interest to many residents – 3rd highest chosen amenity</td>
<td>Increase walking and bicycling in the Town of Grand Chute by adding a perimeter trail to Town Center Park for access to subdivision and other already existing town trails.</td>
<td>-Keep the Comprehensive Outdoor Recreation Plan up to date (CORP) -Create a group to focus on healthy living, bicycling and walking opportunities -Develop a Bicycling and Pedestrian Plan strategy</td>
<td>3-5 years</td>
</tr>
</tbody>

<tbody>
<tr>
<td>Sports Fields (Ball Diamonds) Residents would spend $75 if given $100 for more park amenities. 28% need for more diamonds.</td>
<td>Sports Fields (Ball Diamonds) was the most selected amenity needed</td>
<td>Develop ball diamond, (pony league style) for interleague play</td>
<td>Develop a Master Plan for park, work with area Baseball Groups Follow NR-151 requirements if needed. (5 acres or over of fertilized area, the DNR requires a Nutrient Management Plan.)</td>
<td>1-3 years</td>
</tr>
</tbody>
</table>

Other future attractions to include in the park:

- Nature Areas, Duck Pond and Programming (arboretum)
- More Playgrounds
- More open shelters
- More hiking and biking trails with connections to the park
- Water feature(s) splashpad
- Other multi-trail uses: cross country skiing, snow shoeing, etc.

Grants and funding for these amenities could be subsidized through local interest clubs to assist the town in the development process. Some funding sources that the town could be eligible are listed in Appendix C. The Town of Grand Chute is an urban township with many opportunities and “Town Center Park” is one such amenity that can definitely add to the park system and increase the joy of residents for years to come.

Town of Grand Chute
“Center Park”

2015-2016
SURVEY RESULTS & ANALYSIS
Summary

Total Started Survey: 237
Total Finished Survey: 237 (100%) completion rate

14 Questions
Town of Grand Chute – Survey Analysis
BY THE NUMBERS:

A. INFO/DEMOGRAPHICS

1. Survey Participants Distribution: Just about all who participated are within the Township boundaries or from the City of Appleton (97.85%).

2. Number of Children in Household vs. Age: Results show a typical household with 2-3 children and aged 0-4 years old. The town should look at planning for park facilities to accommodate for younger children.
3. Age range of survey participant was:

35-44 at 38% and 25-34 at 23%, with 56% being female and an average household size of four.

Facilities should be planned for Generations X & Y with the Millennials in mind for future uses.

B. Facilities within the Park:

1. Shelters with restrooms, playgrounds, and picnic areas were the top 3 chosen by participants reflecting the need for family type facilities. Water related, exercise areas, and nature viewing was next on the list as important features to create.

Top 3 for ages 0-8:

2. Heated shelter rental option:

Yes at 49.33% No 50.67%

Feelings were mixed on an all season shelter. If amenities such as an ice skating rink were developed this could change.
C. Access to Current Facilities:

1. Most Participants were able to get to current facilities within an acceptable distance but Pet Exercise Areas and Water Based Facilities seemed to be poorly accessible.

2. Of those that had poor accessibility to a park, the survey results showed their address to be in the vicinity of the neighborhood to the west of the Center Park location, W Barley Way to be specific and also south of W Northland Ave.

Barriers include N Lynndale Drive, CTH A, and I-41 as well as the railroad tracks east of W Glendale Ave.
3. Based on improvement of health initiatives the top three (3) priorities that had a #1 ranking were access related:

D. Funding Support of the New Park and Facilities to Add:

1. In allocating $100 for facilities, (Q12), residents most wanted it to be spent on either a water feature or more trails within the park. Picnic areas and playground equipment were next on the list as shown in the points ranked 1-7 with seven being the most chosen. In the zero or $0 category, the ranking is reversed in the allocation method to accurately reflect the totals.
